

Treasure Island on the Las Vegas Strip Chooses Pelco Endura!

(Las Vegas, NV) After years of research, testing, and review, Treasure Island Casino, a premier resort on the Las Vegas Strip, has selected Surveillance Systems Integration (SSI) as their integrator of choice for their analog to digital conversion. This state of the art renovation will be supported by the cutting-edge technology offered by the Pelco Endura 2.0 system. The objective for Treasure Island is to completely overhaul and update the surveillance and security infrastructure throughout the property. With the implementation of Pelco Endura 2.0, along with Pelco's Virtual Matrix, Treasure Island will be equipped with 1,400 channels of the industry's leading digital recording. The chosen solution will afford the casino the option to move forward with IP or megapixel cameras in the future.

"Treasure Island had a very specific need to integrate their digital system within the limited allowed space of their existing server room. This has been a very time intensive process in which TI did their due diligence with this investment. We had to provide the best solution and still accommodate the needs of our customer. Pelco is a great solution for Treasure Island" explains Rick Phan of SSI.

SSI was the only integrator able to draw up a firm plan and strategy to get this accomplished. In the coordination with Pelco, many hours of diligent research, design, and engineering of the system, SSI was confident the system being proposed would fulfill their needs now, as well as into the future. SSI is an innovative surveillance integrator with headquarters in Roseville, CA. Our top priority is not only to meet, but exceed the needs and expectations of our clients.
