

## **Surveillance Systems Integration to Install New HD CCTV System**

(San Bruno, CA) Artichoke Joe's has been a family founded and family owned business since 1916. The one-room Joe's Pool Parlor switched names to Artichoke Joe's in 1921, becoming a permanent fixture in San Bruno sporting life. Since then, Artichoke Joe's has grown into a 20,000 square foot casino, featuring thirty-eight table games. This casino has never closed, they're open 24 hours a day, 365 days per year.

When the time came to migrate from the previous IBM blade server surveillance system, many options were brought forth for consideration. The casino chose to move forward, and become one of the first casinos in the nation and the first casino in California, to install a full high definition (HD) IP CCTV system throughout the property. The Dallmeier enterprise class system will be installed by Surveillance Systems Integration of Roseville, CA and will include over 175 HD fixed cameras and HD PTZ cameras to clearly identify the cards, chips, dice, dominos, and currency that are present on the gaming floor.

The recording solution supporting the HD system will be a Dallmeier SemSys III VMS server and software suite complete with over 194 terabytes of storage to adhere to gaming regulations for recording and resolution requirements. SSI is an innovative surveillance integrator whose top priority is not only to meet, but exceed the needs and expectations of our clients.
